

MELODYL

ORAL SOLUTION TO ADMINISTER IN DRINKING WATER

Composition

Methyltestosterone 30mg, α -tocopherol acetate 3g, excipient q.s. 100ml

Indications

To enhance birds' singing. Supportive treatment in vocal development.

Target animals

Ornamental and singing birds

Dosage rate and administration

Administer 3 drops of Melodyl twice a week. Before contests it may be every 2 days. Overdosing is not recommendable.

To administer in drinking water: in the previous week work out the average water intake per day.

The amount of Melodyl can be calculated according to the formula

$$\left[\frac{\text{Drinking trough volume}}{\text{Water intake}} \right] \times 3 = \text{N}^\circ \text{ of drops to add}$$

Every bottle cap measures 10 ml and each ml contains 20 drops.

In case water containing Melodyl is consumed within the day, refill the drinking trough with fresh water (without medication)

Contraindications

Melodyl should not be administered to sick birds or to those with hypersensitivity.

Side effects

High doses of testosterone may cause edema, hypercalcemia or weight increase. Vitamin E excess may cause gastrointestinal disorders, weakness and fatigue.
